# **10 questions** every Facility Manager should ask their BAS provider about cybersecurity

**Tip:** Strong BAS cybersecurity should support operational resilience, risk reduction and collaboration between facilities and IT teams.

1. How is cybersecurity built into your building automation platform?
2. How do you help IT and facilities teams collaborate on cybersecurity?
3. How do you support network segmentation and secure architecture?
4. What authentication and access controls are available?
5. What is your process for vulnerability management and security upgrades?
6. How are remote connections secured and monitored?
7. What cybersecurity certifications, standards or third-party assessments support your solution?
8. How is security event logging and monitoring handled?
9. How do you protect legacy systems while maintaining operations?
10. What disaster recovery and backup capabilities are available?
